Work Experience

Ultra Electronics
Software Engineer

September 2017 - December 2017

- Restored and updated legacy code base, tests and configured the project to run in Docker and on Jenkins.
- Worked on various services of a highly configurable large scale C++ and Java microservice project managed by supervisor.
- Developed components for an Eclipse RCP / JavaFX application that interfaced with the microservice project via ZeroMQ channels.
- Created and optimized unit tests written in Gtest and acceptance tests written in the Robot framework.

Gracenote
Full Stack Web Developer

January 2017 - April 2017

- Developed a new Node.js api working extensively with MongoDB to form complex aggregate queries.
- Created a data management tool in AngularJS for non-technical co-workers to manage clients website data across development environments.
- Developed in an agile work environment using Jira for tracking tasks and velocity.
- Debugged and developed a codebase with hundreds of sports widgets in AngularJS and Node.js using Webstorm.
- Developed a custom AngularJS directive for implementing an efficient scrolling table solution and tested for cross browser compatibility using browser stack.

- Completed the co-op work term objective of developing a prototype web application for the company to present to users.
- Worked on all aspects of the sites development, such as the sites design, code base and business logic.
- Worked on a pre-existing code base in Django, Bootstrap and jQuery and used Git for source control.
- Effectively communicated technical aspect of my work at the company to non-technical boss.

Calculus Tutor

January 2015 - November 2015

- Taught calculus to a high school student who achieved a final grade of A.
- Assessed the aspects of mathematics the student struggled with and developed methods to overcome the student's weaknesses.

Additional Software Experience

Mozilla
Ucosp Research Student

January 2018 - April 2018

- Setup Databricks Python notebook for group to perform queries on a S3 record store of Javascript web API call data.
- Developed Jupyter notebook for extracting and formating data from storage/cookie related API calls using Pandas.
- Mined database of JavaScript web API calls for cookie tracking techniques, such as Evercookies.

Dalhousie IBM Bluemix NS Open Data Hackathon

5th - 6th March 2016

- Placed 2nd out of the 1st and 2nd year student category for creating a web application that helps users find a city to live in Nova Scotia by matching the users preferences with Nova Scotia open data records.
- Responsible for developing the front-end using Bootstrap and back-end using JavaScript in Node RED on the IBM Bluemix framework.
